

Perceptions of Political Systems by Country Income

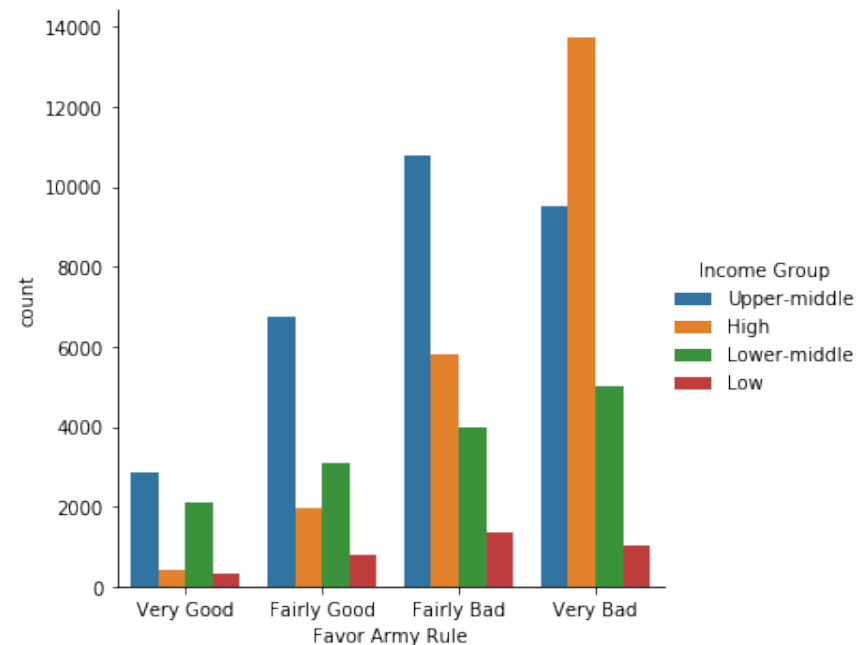

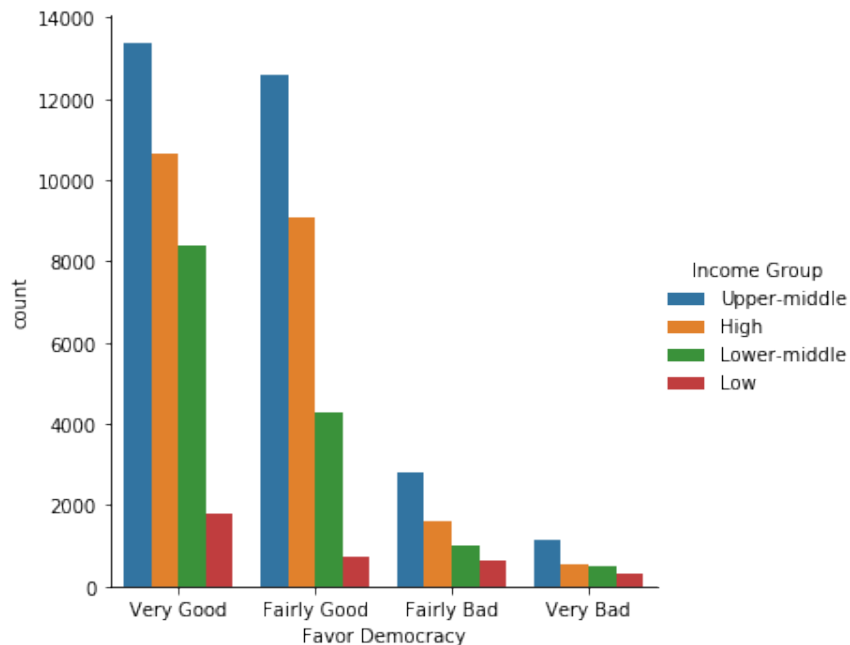

Summary Statistics

- Count of survey responses by Income Group
- Count of survey responses to Democratic Government Favorability
- Count of survey responses to Favor Army Rule

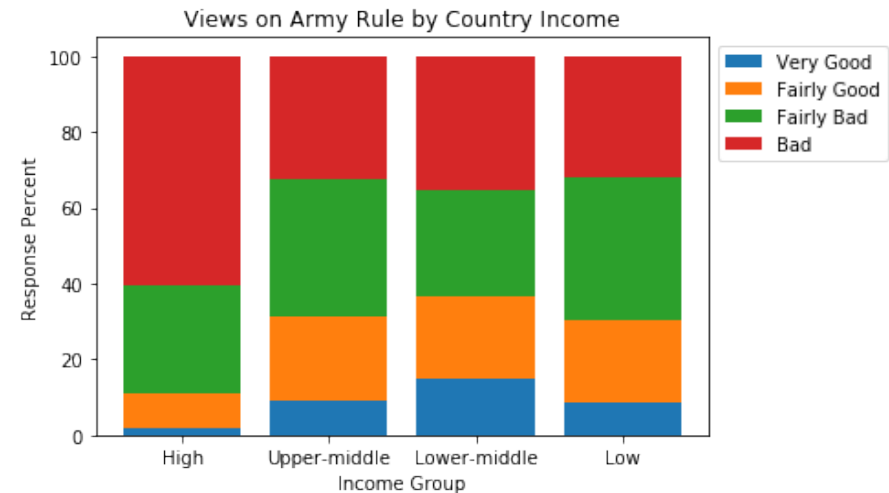

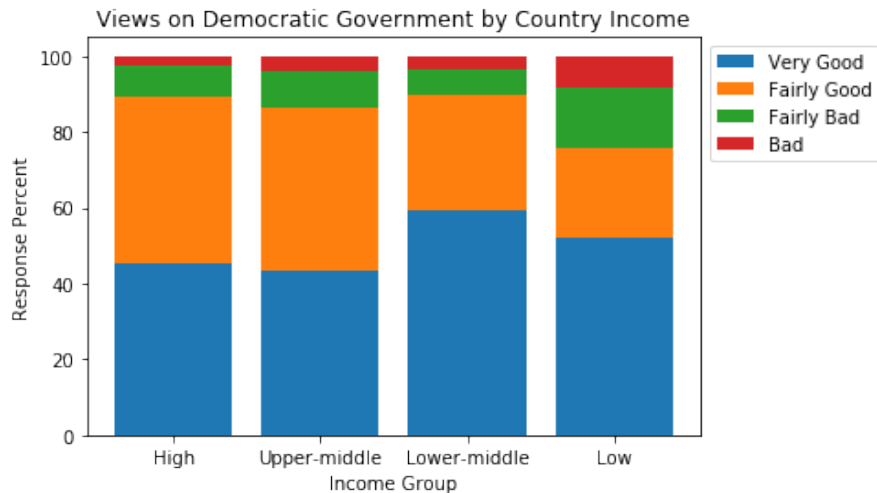

Political System Favorability Response by Income Group

Respondents were asked two questions around Political Systems (V129, V130). The first question was “having the army rule” with response options of “Very Good, Fairly Good, Fairly Bad, Bad.” The second question was “having a Democratic political system,” again with the response options of “Very Good, Fairly Good, Fairly Bad, Bad.”

Political System Favorability Response Percentage by Income Group

Viewing the responses as a percentage of total responses per income group does show some patterns emerge. Primarily Lower income group countries are less favorable towards Democratic systems than higher income countries. They are much more receptive to army rule as well.

Potential Additional Explorations

While a countries income group does seem to offer value as an explanatory variable there are many other factors that might explain a respondents attitudes towards Democratic and Army Rule forms of government as well. Including:

- Population
- Current Government Type
- Religious Views
